However, I'd like to parse the result into one list (e.g., domain\administrator) if all of the usernames are one string. Is there a way to strip out

all of the "domain\username" strings and have it replace with just "username" if all of the usernames are the same? # Connects to active directory and gets all of the users with # Administrator privileges. \$Username = Read-Host 'Please enter the username.'
Get the list of usernames. \$Usernames = Get-ADUser -Filter 'SamAccountName -like "*domain*"' -Properties *
-SearchBase "CN=Users,DC=domain" # Connect to the local administrator account and read its password. \$LocalAdmin = (Get-Credential).GetNetworkCredential() # Go through the list of usernames and output the results. foreach(\$User in \$Usernames) {
if (\$User.PasswordIsPresent) { \$Password = \$User.Password } else { \$Password = \$LocalAdmin.Password 82157476af
